

JETSTREME I & II MOUNTING INSTRUCTIONS

FOLLOW INSTRUCTIONS CAREFULLY TO PREVENT PERSONAL INJURY AND/OR DAMAGE TO THE FAN UNIT OR COMPONENT! ALWAYS DISCONNECT ONE OF THE BATTERY CABLES OR REMOVE POWER FUSES FOR A CIRCUIT WHEN INSTALLING AN ELECTRICAL FAN OR COMPONENT!

NOTE: Do not remove label from underside of shroud as this will void the products limited warranty.

NOTE: The fans contained in this assembly are assembled in puller configuration from the factory. While these fans can be reversed to be pusher fans, We do not recommend using this assembly as pusher fans on the front side of the radiator due to the large amount of ram air that is blocked by the shroud. Fans used as pushers should only be used as a last resort when there are no other options for mounting.

NOTE: We DO NOT recommend the use of nylon tie kits or any other "through core" mounting methods for this fan assembly. The motor used in this fan assembly is too heavy and produce too much starting torque to be supported by the radiator fins.

We recommend using a prefabricated mounting kit **MFA107** (included) or fashioning metal brackets that will attach to at least four of the six 1/4 - 20 nylon reinforced nuts pressed in the back of the shroud and then bolted to the U-channels of the radiator/heat exchanger (See Fig 1.). 1" X 1/4-20 bolts are recommended to attach the brackets to the shroud. Bolts must NOT be long enough to contact the radiator/heat exchanger. See Fig 2 on page 2 for bolt pattern.
